Enterprise Security and Data Privacy

Boeing’s Global Privacy Office is responsible for overseeing the management, use and security of personal information held by the company, including personal data from employees, customers and suppliers. Our privacy program focuses on protecting data, respecting privacy and enabling trust. To safeguard personal information, we employ a principles-based approach to data privacy that aligns with key privacy laws and frameworks in the U.S., European Union and other jurisdictions.

Boeing has also established a Global Security Governance Council to further strengthen governance and enhance coordination of our security activities. Learn more about the work of our council in our [Proxy Statement](#).

Boeing Enterprise Security is critical to Boeing’s operations around the world, and we continue to employ industry-leading security practices, while leveraging software and product security engineering to protect our people, property, networks, systems and information from physical and cyber threats. Boeing’s security strategy prioritizes detection, analysis and response to known, anticipated or unexpected threats, effective management of security risks and resiliency against incidents. In order to protect both commercial and defense-related businesses and support our production operations, Boeing has adopted security principles that align with global security standards, such as the National Institute of Standards and Technology Cybersecurity Framework, and adheres to contractual and regulatory security requirements.

Boeing self-phishing program helps reduce security threats

Boeing Enterprise Security’s Self-Phishing Program educates employees about phishing, which involves sending simulated emails to create a “sense-of-urgency” response to click on a link, enter sensitive information, or, best-case scenario, report the “fake” phishing scam.

2022 by the numbers:

- 22% drop in employee clicks on phishing simulations from 2021.
- 17% improvement from 2021 in simulated suspicious email reporting.

It comes down to this: Phishing is the most typical way companies are hacked. It’s important for employees to be vigilant against cyberattacks to protect the business and personal data.

“Phishing is one of the most effective ways threat actors exploit people and companies. It relies on pushing a high volume of phishing-related content and distraction — the worst condition in the modern workplace today. If users aren’t careful and trained to spot a phishing email, they may carelessly click on a link or attachment, thus placing Boeing at risk.”

Richard Puckett, chief security officer and vice president, Boeing Enterprise Security

2022 Community Engagement Highlights

Through purposeful investments, employee engagement and advocacy efforts, Boeing supports partnerships and programs that align with our business, create value and help build better communities worldwide. We have an opportunity and a responsibility to be a positive force for change in the places we call home. Boeing focuses on opportunities that inspire our future, empower our heroes and strengthen our homes, with an emphasis on advancing racial equity and social justice, and protecting the environment.

Learn more about our community engagement work in the [Boeing 2023 Community Impact Portfolio](#).

Invested approximately
\$2B in Boeing communities over the last 10 years

Contributed
\$80M in charitable grants in 52 countries in 2022

Invested
\$50M across 444 grants in support of STEM education and workforce development programs in 2022

Boeing and its employees invested
\$197M+ to help build better communities worldwide in 2022

Employees donated
\$63M¹ and 366,000 volunteer hours to charitable causes in 2022

Partnered with
13,000+ community partners globally in 2022

Donated
\$13.3M across 116 grants in support of veterans programs in 2022

Our Heroes

Boeing employees help build homes for veterans

On a sunny, but chilly December day in 2022, more than a dozen Boeing volunteers learned the trade of home construction with Boeing’s community partner in St. Louis, Veterans Community Project (VCP).

They helped cut, measure and install siding on a tiny home in the new VCP Village, where approximately 50 tiny homes and a community center for homeless veterans are currently under construction.

Why it matters: Boeing helps veterans and their families after their military service has ended, investing more than \$14,100,000 in 2022 in support of skills development and job training, and recovery and rehabilitation programs. Since 2021, Boeing has invested \$150,000 with VCP to help with home construction and education programs.

Boeing supports environmental sustainability in communities around the globe

Why it matters: Boeing is working to build better, more equitable communities through corporate investments, employee engagement programs and advocacy efforts, which include support to protect the environment around the world. Boeing contributed \$5 million in support of environmental programs in 2022.

Americas

- **U.S.:** Boeing supports the National Forest Foundation’s Project Green Drone, an educational program dedicated to strengthening the STEM pipeline in the Phoenix area. Together with the Ecoculture Team at Northern Arizona University and other local partners, the National Forest Foundation engages more than 500 local middle and high school students in STEM-focused activities to address real-world environmental projects, including a watershed restoration project on the Lower Salt River. The project is diversifying the pipeline for conservation talent while working on protecting fresh water supplies and using innovative technology to preserve public lands.
- **Argentina, Bolivia, Brazil, Chile, Colombia, Ecuador, Mexico and Panama:** Boeing is supporting the Pan American Development Foundation (PADF) that is active in eight countries, working with teachers, and primary and university or post-university students to find solutions to local environmental issues. For example, in Bolivia, PADF works with partners to develop a curriculum about alternative energy, waste management, natural resources

and identifying local solutions. In Ecuador and Mexico, local partners will work with teachers to design lessons that address local needs such as reducing pollution, using plastic alternatives or storing electricity.

Asia

- **Korea:** Boeing supports the Climate Science Class program, which is part of Korea Green Foundation, benefiting 550 young leaders. The goal of the program is to foster next-generation green leaders who will solve climate change problems, including biodiversity loss and forest destruction. It also examines human influence and regional environmental issues and technology solutions. Climate change, in particular, is a broad and complex phenomenon and is a suitable subject for implementing the purpose of modeling-based learning, which constitutes an explanatory framework based on a variety of data.

Europe

- **Italy:** “School Cleaning Day” is an environmental education program — organized by ScuolAttiva Onlus with support from Boeing — that works to encourage Italian students and

teachers to adopt ecological models of behavior and awareness of sustainable development and environmental protection. The initiative provides Italian youth in kindergarten through sixth grade with early access to learning about sustainability and developing a sense of responsibility. By discovering the best practices of environmental protection around the world, students understand the impact of their actions on the future of our planet.

Middle East and Northern Africa

- **Türkiye:** With Boeing’s support, the Istanbul Technical University Foundation’s Enhanced Training Content program within the Aviation Sustainability Alliance Türkiye raises awareness about and supports the creation of sustainability developments in aviation through three signature programs. The training program, tailored for specific audiences, provides educational content to students, teachers and aviation professionals; the Hackathon encourages students to think creatively about how to help lessen the environmental impact of aviation; and the Innovation Conference brings together students, academics, industry experts and others to explore innovative ideas in aviation sustainability.
